Clinical trials

Innovative care closer to home

**We've run more than
150 clinical trials bringing
advanced care and hope
to our community.**

Clinical research plays an essential role in patient care at Grampians Health. Our goal is always to provide the best possible care and improve health outcomes for our community.

We are proud to be the largest clinical research organisation in western Victoria. Over the past 20 years, our teams have undertaken more than 150 clinical trials across many different health conditions.

Why clinical trials matter to you and your community

Clinical trials help improve healthcare for everyone – now and in the future.

A clinical trial is a research study where people volunteer to help test new ways to prevent, detect, treat or manage health conditions. These may include new tests, treatments, procedures, or changes to the way care is delivered.

Without clinical trials, new medicines and medical devices cannot be approved for use in Australia.

Research and clinical trials go hand-in-hand with discovering and improving patient care and treatment.

Clinical trials can give patients early access to innovative treatments, they can improve quality of life for a range of diseases and contribute to the development of new and improved treatment.
